

ABSTRACT OF THE DISCLOSURE

In conjunction with a spray bottle having a manually operated, elongated trigger-type grip, this invention improves upon the existing art by providing a cover for the grip. In the preferred embodiments, such a cover is in the form of a sleeve of pliable material 5 having an open end, a closed end, an internal length and an internal cross-sectional dimension, and wherein the length is on the order 2.5 cm or less; and internal cross-sectional dimension is on the order of 1 cm or less. The material may by vinyl, PVC, or other polymeric, preferably of the chemically resistant variety. The internal cross section of the sleeve may be circular or rectangular, depending upon the grip type, and may be 10 composed of a coextensive liner and overlay.
